// Clone='The library Gm-r1070 is a sequence-driven, reracked set of 9,216 clones selected from clonal tissues and stages of development of soybean that represent 2,639 sequences from immature seed coats, 3,938 from flowers, and 869 from young pods. The 5' ESTS of the source clones from the different library Gm-contig, which were reracked to a representative of each contig, which were reracked Gm-r1070 library were then sequenced at the 3' end. The contig analysis to select unique genes was performed by the laboratory of Ernest Retzel, Center for Computational Genomics and Bioinformatics, University of Minnesota, http://www.cbc.umn.edu/ResearchProjects/Soybean/index.html.

**Reracking was performed by Genome Systems, St. Louis, http://www.life.uiuc.edu/biotech/keck.html. Note: The corresponding 5' EST from each clone in the Genomics, uniformation on the source library for each clone can also be obstained by referring to the Genome Systems clone ID of the original cDNA library that is also listed under 'OTHER EST'."

cDNA fragments followed by XhoI digestion. The cDNA fragments were directionally cloned into the EcoRI-XhoI restriction site of the pBluescript vector. The ligated cDNA fragments were transformed into DHIOB host cells (GibcoBRL). The library was constructed in cooperation with Dr. Paul Keim's laboratory at Northern Arizona University." //done liber@m.colo68 library was constructed from mRNA isolated from drought atressed leaf tissue of the cultivar Williams 82. The month old greenhouse grown plants were deprived of water for 3 days prior to harvesting the stressed leaf tissue. Complementary DNA was synthesized from mRNA using a primer consisting of a poly(dT) sequence with a XhoI a primer consisting of a poly(dT) sequence with a XhoI restriction site. EcoRI adapters were ligated to the blunt-ended cDNA fragments followed by XhoI digestion. The CDNA fragments were from the into the EcoRI-XhoI restriction site of the pBluescript vector. The ligated cDNA fragments were transformed into DH10B host cells (GibcoBRL). This library was constructed in the laboratory of Dr. Randy Shoemaker."

/note="Vector: pBluescript II XR; Site 1: EcoRI, Site 2: XhoI; This cDNA library was constructed from mRNA isolated from whole seedlings of 2-3 week old greenhouse grown plants. The cDNA library was prepared using the Stratagene pBluescript II XR cDNA library construction kit. Complementary DNA was synthesized from mRNA using a primer consisting of a poly (AT) sequence with a XhoI restriction site. EcoRI adapters were ligated to the blunt-ended cDNA fragments followed by XhoI digestion. The cDNA fragments were directionally cloned into the EcoRI-XhoI restriction site of the pBluescript vector. The ligated cDNA fragments were transformed into Xillo-Gold host cells. This library was constructed by Dr. Randy Shoemaker and Dr. John
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     BQ630213 555 bp mRNA linear EST 21-OCT-2002 sap99d04.yl Gm-c1045 Glycine max cDNA clone SOYBEAN CLONE ID: Gm-c1045-3248 5' similar to TR:004197 004197 HYPOTHETICAL PROTEIN.

The cotyledons were flash-frozen in liquid nitrogen, then lyophilized for 72 hours. Unequal amounts of mRNA was used for CDNA synthesis. Stratagene's CDNA Synthesize the cDNA. Pirst- stranded synthesize was performed with 5-methyl dCTP, hence the ligated CDNA was
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AW759107 574 bp mRNA linear EST 03-DEC-2001 sl34g02.yl Gm-c1027 Glycine max cDNA clone GENOME SYSTEMS CLONE ID: Gm-c1027-3243 5' similar to TR:004197 004197 HYPOTHETICAL PROTEIN.

hemimethylated. A modification of Stratagene's first-strand synthesis primer was used. An anchor nucleotide (V-A, C, or G) was added to the 3' end of the primer [GAGAGAGAGAGAGAACATAGTCTCGAG(T)18] to anchor the primer at the 5' end of the poly(A) tract. After second strand synthesis, the CDNA ends were filled in with cloned Pfu DNA, ligated to EcoRI adapters and subsequently phosphorylated. The XhoI site within the first-strand synthesis primer was then restricted by first-strand synthesis primer was then restricted by digestion with XhoI; all XhoI sites in the CDNA constructs were size-fractionated with a 500 bp cutoff, using dibocaRI Life Technologies' CDNA Size Fractionation column. The column eluent was then ligated into Stratagene's spluescript (m) II XR Pecalgested vector (pBluescript II SK(+) that has been digested with EcoRI and XhoI, and phosphorylated by Stratagene's 97% of the white and blue colonies appear to contain recombinant plasmids with cDNA inserts, based on size (n-30). This library was constructed by Dr. Paul Keim and Dr. Virginia Coryell."

New nucleic acid sequences encoding new disease resistance factors, useful for producing plants with increased resistance to pathogens and to screen for herbicides. 2000-687649/67. WPI; 2000-687649/ N-PSDB; AAA95063.

Claim 10; Fig 1; 74pp; English.

Expressed sequence tags (ESTs) from rice, wheat, soybean and corn cDNA libraries were found to be similar to cDNA encoding the Arabidopsis thaliana COII protein and the Zea mays LLSI protein. The present sequence is protein encoded by cDNA from the soybean clone sgs4c.pk003.k23:fis which is homologous to COII. The COII and LLSI proteins are involved in disease resistance. The COII and LLSI DNAs of the invention may be used to alter the expression of COII and LLSI protein in cells, particularly to produce transgenic plants with increased systemic resistance to a wide range of pathogens. COII and LLSI proteins may be used to identify inhibitors of these proteins, which may be useful as herbicides

Expressed sequence tags (ESTs) from rice, wheat, soybean and corn cDNA libraries were found to be similar to cDNA encoding the Arabidopsis thaliana COII protein and the Zea mays LLS1 protein. The present sequence is protein encoded by cDNA from the corn clone poll28.cpici34r:fis which is homologous to COII. The COII and LLS1 proteins are involved in disease resistance. The COII and LLS1 proteins are involved in disease the expression of COII and LLS1 protein in cells, particularly to produce transgenic plants with increased systemic resistance to a wide range of pathogens. COII and LLS1 proteins may be used to identify inhibitors of these proteins, which may be useful as herbicides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Lee J,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        03-MAY-2000; 2000WO-US011956.

                                                                                                                                                                                                                                                                                                                                                                                   셤
                                                                   à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Expressed sequence tags (ESTs) from rice, wheat, soybean and corn cDNA libraries were found to be similar to cDNA encoding the Arabidopsis thaliana COII protein and the Zea mays Libsi protein. The present sequence is protein encoded by cDNA from the rice clone flom.pk099.pl4:fis which is howologous to COII. The COII and LISI proteins are involved in disease resistance. The COII and LISI DNAS of the invention may be used to alter the expression of COII and LISI protein in cells, particularly to produce transgenic plants with increased systemic resistance to a wide range of pathogens. COII and LISI proteins may be used to identify inhibitors of these proteins, which may be useful as herbicides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ESLKLKGKPRAAMFNLIPEDWGGHVTPWVKEISQYFDCLKSLHFRRMIVKDSDLQNLARD 147

Expressed sequence tags (ESTs) from rice, wheat, soybean and corn cDNA libraries were found to be similar to cDNA encoding the Arabidopsis thaliana COII protein and the Zea mays LLSI protein. The present sequence is protein encoded by cDNA from the rice contig which is homologous to COII and LLSI proteins are involved in disease resistance. The coil and LLSI protein in cells, particularly to produce transgenic plants with increased systemic resistance to a wide range of pathogens. COII and LLSI proteins may be used to alter the expression of COII and LLSI proteins may be used to identify inhibitors of these proteins, which may be useful as herbicides

An isolated polynucleotide (I) comprising a sequence (Ia) encoding a polypeptide (II) of at least 60 amino acids (aa) from any of 18 specified polypeptide (II) of at least 60 amino acids (aa) from any of 18 specified composition of (IIa), is sequences, given in the specification, or the complements of (IIa), is and can be used, in sense or antisense orientation, to alter the composition of (II) in cells, particularly to produce transgenic plants with increased systemic resistence to a wide range of pathogens. (I) or their fragments are also used for gene mapping (e.g. for plant breeding) and to identify loss of function mutants. Polypeptides (II) encoded by can und/or identify specific antibodies (for detection of (II)) and to design and/or identify specific inhibitors of (II), potentially useful as herbicides. This sequence is the rice COII protein created from a contign of rir2.pk0027.h4, r10n.pk099.p14 and rlon.pk0047.c5 as described in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 H
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New nucleic acid sequences encoding new disease resistance factors, useful for producing plants with increased resistance to pathogens and to screen for herbicides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       447
